

Stoma Care Department

NHS Ayrshire & Arran

Patient details

Date:

The above patient has a permanent colostomy and after discussion with their stoma nurse specialist, has decided to start irrigating their colostomy. This involves using a specific system/equipment, which will be provided by their usual delivery company or chemist.

Their delivery company/chemist will contact you for an initial prescription and going forward will periodically request prescriptions to replace equipment.

Initially the patient will continue to use their usual stoma pouch until confident irrigating. They may then change to a stoma cap or a mini pouch.

Please contact us if you require any further information.

Kind Regards

Vicki McAllister & Tracey McMeekin
